PROFESSIONAL SUMMARY

Full Stack Developer specializing in React.js, Node.js, and MongoDB with hands-on experience building real-world projects like survey systems and AI-based healthcare platforms. Strong problem-solving skills with experience in API development. Passionate about building scalable web applications and learning Cloud services.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, HTML5

Backend: Node.js, Express.js, Flask, RESTful APIs

Frontend: React.js, HTML, Next.js, Bootstrap, Tailwind CSS

Database: MySQL, PostgreSQL, MongoDB

Tools : Git, GitHub, Postman

RELEVANT EXPERIENCE

Real-Time News Aggregation & Sentiment Analysis Platform | Academic Project

Sep 2025 - Nov 2025

React.js, MongoDB, Express.js, Node.js, Python, Flask

- Designed and developed a real-time news aggregation platform fetching and processing 1,000+ articles daily from multiple APIs using Node.js and RESTful services.
- Implemented NLP-based sentiment analysis model to classify news content into positive, negative, and neutral categories, improving content understanding and user insights.
- Developed dynamic and responsive frontend using React.js to display categorized news with sentiment indicators, improving user engagement and readability.
- Built a fake news detection system using machine learning algorithms, achieving high accuracy in identifying misleading and unreliable news sources.

PROJECTS

SaaS - Survey Form Builder Platform | GitHub

Feb 2025 - May 2025

React.js, Node.js, Express.js, MongoDB, REST APIs

A full-stack SaaS platform that enables users to create, share, and analyze dynamic survey forms with real-time response collection.

- Built scalable RESTful APIs handling 500+ survey responses with support for 4+ dynamic question types (text, MCQ, checkbox, file upload)
- Developed an interactive admin dashboard for real-time analytics and insights, improving decision-making through structured data visualization.

Plant Disease Prediction System | GitHub

Aug 2025 - Nov 2025

Python, Flask, TensorFlow, OpenCV, Machine Learning

An AI-based system that detects and classifies plant diseases from leaf images to enable early diagnosis and support sustainable agriculture.

- Trained and deployed CNN-based model achieving ~90% accuracy in classifying 10+ plant disease categories using image datasets.
- Built a Flask-based web application for real-time image upload and prediction, enabling accessible and user-friendly disease detection.

CERTIFICATIONS & ACHIEVEMENTS

- Developer & Technology Job Simulation – Forage (Jul 2025)** | Gained hands-on experience in SDLC, debugging, and software development methodologies
- Adobe India Hackathon – Participant (2025)** | Cleared Round 1 (MCQ + Coding) among 1000+ participants
- Full Stack & Programming Certifications – Infosys Springboard (2024–2025)** | Completed courses in React.js, Java, and Python development

EDUCATION

B.Tech in Computer Science

Mahatma Gandhi Mission's College of Engineering, Nanded

2022 - 2026 (Expected) | CGPA: 6.67/10.0
